

# RM338

## **Unmatched Accuracy & Extended Range**

**The RM338 is a simple, well-designed gun ideally suited to provide long range lethality and standoff capability for U.S. forces. This next generation lightweight medium machine gun gives warfighters a distinct advantage in both extended and close quarter fighting. Eliminating the gap between the 7.62mm and .50 caliber weapons, the RM338 utilizes the highly efficient .338 Norma Magnum cartridge, offering overmatch capability through unmatched accuracy and lethality while extending the battlespace out to an impressive 2,200 meters.**

**At 1,000 meters, the RM338 is capable of defeating Level III body armor and incapacitating soft skinned vehicles by delivering over 1,900 foot pounds of energy to the target (more than 5x the terminal effects of 7.62mm NATO). Weighing 25 pounds and featuring a fully collapsible and folding stock, the RM338 offers superior mobility and portability in both mounted and dismounted operations.**

**The RM338 features a patented, revolutionary recoil mitigation system reducing felt recoil to the operator, thus providing a recoil profile similar to a 7.62mm NATO machine gun.**

# RM338

## Characteristics

The RM338 features a quick change barrel with fixed headspace and timing as well as an integrated MIL-STD-1913 rails, allowing the use of a variety of optics, lasers, and accessories.

The weapon's simple design quickly breaks down into six functional groups (30% less parts than the currently fielded GPMG). All field maintenance is performed without the need for special tools. The RM338 adapts to currently fielded M240 tripods and vehicle mounts (land, sea, and air)

The patented technology of the Short Recoil Impulse Averaging substantially reduces recoil and improves target retention during automatic fire. The light weight and low recoil of the weapon affords operators of all sizes the ability to carry and deliver lethal effects.

## Operational Value

The RM338 is a weapon system that greatly expands the operational capabilities of the warfighter. The weapon is ideally suited for both mounted and dismounted operations (the increase in effective range and lethality in a lightweight form is substantial for dismounted operations). The mounted configuration provides long range, accurate fire currently associated with the M2 Browning, but without the burden of a heavier weight.

## SPECIFICATIONS

**Weight:** 25 lbs.

**Length:** 49 in.

**Rate of Fire:** 500 rounds / minute
